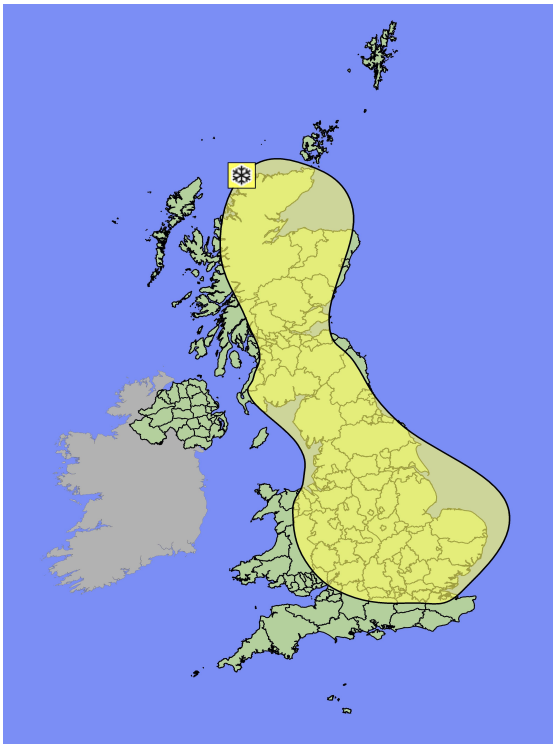
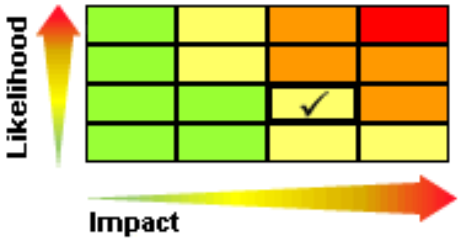
National Severe Weather Warning Service





Chief Forecasters Assessment
An active Atlantic frontal system will spread sleet and snow across the UK during Friday. Further snow accumulation is likely, particularly over high ground.

There remains uncertainty in the overall amounts of snow, and the southern extent of possible disruption, so watch for further updates to this warning.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **09:00 on Fri, 25th Jan 2013** until **04:00 on Sat, 26th Jan 2013**

Further snowfall will spread from the west, as another weather front moves across the UK from the Atlantic. Snow will largely affect Scotland during the afternoon, before spreading to many northern, central and eastern parts of England during the evening, likely to clear from southeast England and East Anglia during the early hours of Saturday.

2-4 cm is likely in the south of the yellow warning area, with 4 to 8 cm over some hillier areas. Further north, 4 to 8 cm is more likely with over 10 cm over hills. Strong winds will also lead to drifting, particularly over higher level roads in the north.

This warning is an update, which pulls the boundaries of the warning area further west into Wales and further south into southern England.

The public should be aware of possible disruption, particularly to travel.
